

Axxess Business Intelligence

Leaders understand delivering the very best care requires data-driven insights that measure and track performance across their organization. Axxess Business Intelligence (BI) gives organizations analytics and actionable insights needed to drive operational performance and improve patient care outcomes. Axxess Business Intelligence is powered by Tableau®, a robust data visualization tool that displays information through customizable reports and dashboards.

Using Axxess BI, leaders have a comprehensive view of operational, financial and clinical key performance indicators, including how they're trending over time.

How it Works

Organization Data Sources

REPORTING

Axxess Business Intelligence Benefits:

STREAMLINED OPERATIONS

- Reporting indicators viewable by multiple measures with a single click
- Data can be viewed in numerous ways making dashboards relevant to different roles across the organization
- Drill down capabilities provide quick insights to enable rapid corrective action

IMPROVED CARE OUTCOMES

- Quality improvement dashboards updated daily for rapid improvement measures
- Process and outcome indicators drill down to clinician level
- Quality and patient satisfaction scores benchmarked using Home Health Compare

FINANCIAL GROWTH

- Graphic visualization of claim information across the revenue cycle
- Dashboard view of run rate to budget for easy visual of key financial indicators
- Monitor revenue diversification to achieve an optimal balance of payer sources

Axxess Business Intelligence is a fantastic way to view a high-level snapshot of our agency's metrics. Now, I can dig into our KPI Overview dashboard without needing to do anything in spreadsheets anymore. This data has been helpful to leadership, because it helps drive our decisions for the organization.
